

BUSINESS SERVICES

Grow faster with ISDN PRI.

Grow with a future ready voice network.

Integrated Services Digital Network service gives 30 digital channels out of which each channel can be configured as incoming, outgoing or two-way.

ISDN PRI is a local exchange access service that creates a direct digital connection of 30 channels of 64 kbps each, (2Mbps for a PRI) from Tata Docomo switch to provide voice, data, image and video services on a single line.

Features

- Eliminates cost of individual dedicated lines
- Designed to allow digital transmission of voice and data on E1 connectivity, resulting in better quality and higher speed
- Direct Inward Dialing (DID), and Direct Outward Dialing (DOD)
- Allows a generous number of standard and optional features to work with the service, especially Caller ID
- Extension-wise Billing on PRI provides the user with the capability to track usage on each PBX extension and control the cost
- Customized Signature Tunes available on individual lines
- Disaster recovery
- Circuit switched capability can provide alternate paths in the event of emergency
